# JET

BATERIAS

The JET Enhanced Flooded Battery (EFB) is perfectly suited for light vehicles with standard Start/Stop systems which operate at a partial state of charge and do not require the deep-cycling characteristics of an AGM battery. Our technology with improved plates are produced with the addition of special materials in both positive and negative plates in order to reach the durability, autonomy and power required for this class of application.

## MAIN BENEFITS

- Improved EFB technology;
- Using of nanotechnology;
- Excellent for standard Start/Stop systems;
- Supports extended engine-off periods;
- High starting power;
- High cycling performance;
- Improved charge acceptance;
- Sealed maintenance free SMF;
- Long service life and reliability.
